

VenueVista

EventPro Ticketing & Venue Management System

- Team Project
- A web-based event, venue, ticket and booking management system

Problem Statement

01

Managing events, venues and tickets separately can be difficult.

02

Users need an easy way to view upcoming events and available tickets.

03

Manual booking management can lead to duplicate or incorrect seat bookings.

04

A centralized system can connect events, venues, tickets and bookings.

Proposed Solution

VenueVista provides one platform for event and venue management.

Users can view upcoming events and available venues.

Users can view ticket details and available quantity.

Users can book tickets by selecting quantity and seat numbers.

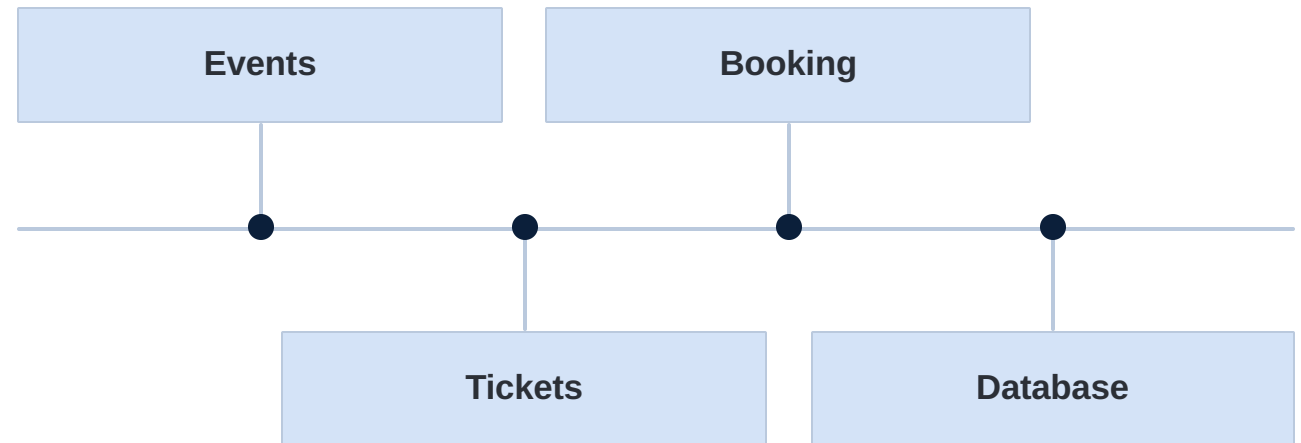

Bookings are stored and can be viewed later.

Ticket availability is updated after booking.

Main Modules

- 01 Home
- 02 Events Management
- 03 Venue Management
- 04 Ticket Management
- 05 Booking Management
- 06 Employee Management

MODULE FLOW

Technology Used

Frontend

- Angular
- HTML
- CSS
- TypeScript

Backend

- Java
- Spring Boot
- REST APIs

Database

- MySQL

Tools

- VS Code
- Maven
- Git/GitHub
- Thunder Client

How VenueVista Works

01 User opens VenueVista.

02 User explores available events and venues.

03 User selects an available ticket.

04 User enters quantity and seat numbers.

05 Backend validates the booking.

06 Booking is stored in MySQL.

07 Ticket availability is updated.

08 User can view booking details.

“VenueVista aims to provide a simple and centralized solution for event, venue, ticket and booking management.”
